

# JASCO Announces The Release Of Software Drivers For Analyst® Software

By Kristen Burkhardt / October 1, 2008

JASCO Announces the Release of Software Drivers for Analyst® Software from Applied Biosystems/MDS Analytical Technologies

JASCO has now developed drivers for Applied Biosystems/MDS Analytical Technologies' Analyst® software to allow scientists to control its X-LC® (UHPLC) and supercritical fluid chromatography (SFC) systems, ideal for front- ending mass spectrometry systems from the Applied Biosystems/MDS Analytical Technologies joint venture, a leader in the mass spectrometry market.

JASCO has been a manufacturer of high quality chromatography systems such as HPLC , UHPLC and SFC since 1978 and continues to supply innovative chromatography products for a broad range of customer applications. With a strong customer focus, JASCO will be solely responsible for providing service and support for the new driver of its X-LC and SFC systems with the Applied Biosystems/MDS Analytical Technologies software.

Analyst® software is advanced software that runs Applied Biosystems/MDS Analytical Technologies mass spectrometers, delivering full system integration and easier-to-use functionality. It can serve as a single point of control for JASCO HPLC components. Applied Biosystems/MDS Analytical Technologies continues to advance Analyst software. Applied Biosystems is a global leader in the development and commercialization of instrument systems, software, consumables and services for the life-science market, and, through its joint venture with MDS Analytical Technologies, it is the world leader in providing complete workflows for the mass spectrometry market, based on industry-leading platforms, software and new application workflows.

For more information on JASCO's chromatography products, call 800-333-5272.
